

## ***CUSTOMER CONNECTION DRAWINGS***

The purpose of the Customer Connection drawing(s) is to demonstrate that the recycled water use site will comply with the State of California water recycling criteria and District Standards. The drawings will be submitted to the State Department of Health Services (DHS) for review and approval. The drawing(s) should identify the reuse areas, main potable and recycled water lines on-site, valves, sign locations and identify any special conditions appropriate for the site. The example customer connection drawing included in this section is provided as a guide to assist in preparation of an acceptable drawing.

Also included in this Appendix are a Plan Review Checklist for use by preparers of the Customer Connection Drawings, and four scenarios for ways in which a temporary or permanent connection can be configured to allow for testing, retrofit of existing sites, and permanent connection.
